Panel to be used only on safety guards with pneumatic blocking system

Pneumatic control panel with low voltage (input 24Vac) for the blocking system of the safety guards rotation axis according to the stopping time of the machine spindle. The system allows the opening of the guard only when the machine is stopped and has a safety control which, in the absence of air, prevents the machine from functioning by signaling the presence of a malfunction with a warning light on the front panel. Prepared for the use of additional alarm systems, acoustic and visual ones.

BOX DIMENSION (W x H x D): 200x170x100mm

OPTIONAL: BRACKET SQE 02

Our protections comply with the machinery directive 2006/43/CE
